

#### 7 Ideas For Lowering Your Energy Bill And Being More Green

These ideas come from my father: Frank Levy. He's pretty smart regarding being green & building & designing houses.

- [1] All outdoor lights should be solar powered.
- [2] Use solar panels for swimming pool, hot water, and electricity.
- [3] No hot water storage. Only use instant hot water makers.
- [4] Heat rooms only when and where needed.
- [5] Use only the new kind light bulb to reduce electric bill by 50%.
- [6] Ventilate the attic.
- [7] Every decision made on a house should add value or reduce energy usage.
